"Extremely User-Friendly Robust ERP"

What do you like best about Sage Intacct?

Sage Intacct was a breath of fresh air after other mid-size ERPs I have experienced inthe past. So user-friendly, easy to learn and understand to start taking advantage of all the features right away. It allows for what I call 3D accounting, where any GL number can be combined with any department or other dimension you chose to track. Which in turn provides an opportunity to have a much shorter COA. At the same time, Sage Intacct is robust enought to allow set up of smart rules, where you can restrict certain GL, Dept, Station combination to not have advertising expense in Engineering and insurance expense in Programing, for example. Reporting is great as well: flexible and easy to use for regular, non-IT oriented users to create reports. The system is very flexible to accommodate various business needs like reporting on mulptipe markets and radio station within them, setting up various books to allow for posting of non-cash (barter) transactions in a separate set of books, while also allowing seamless consolidated reporting on both. It seems the sky is the limit with Sage Intacct.

What do you dislike about Sage Intacct?

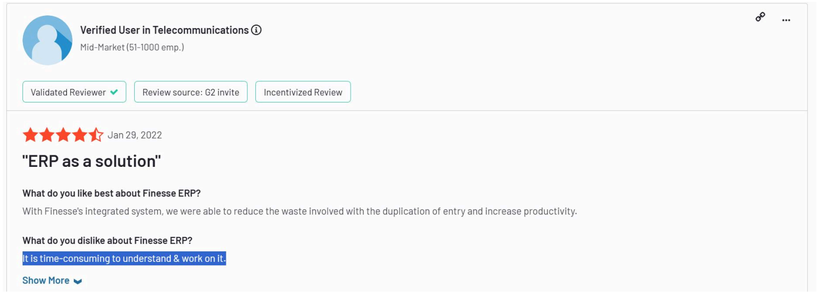
User reviews



What do you dislike about FDM4 ERP?

Lack of documentation/ processes on FDM4's end. The support and defined processes has improved over the years, however, we still struggle from the lack of documention for preciously implemented change requests.

Growth Strategy

Brand

1. Competitors research for better Brand and Value Prop positioning
2. Customer research
3. Website redesign
4. Re-branding
5. Distancing from ‘legacy system’ perception
6. Social media presence with engaging stories -- how SARAS is faster than competition etc.

SEO and Marketing

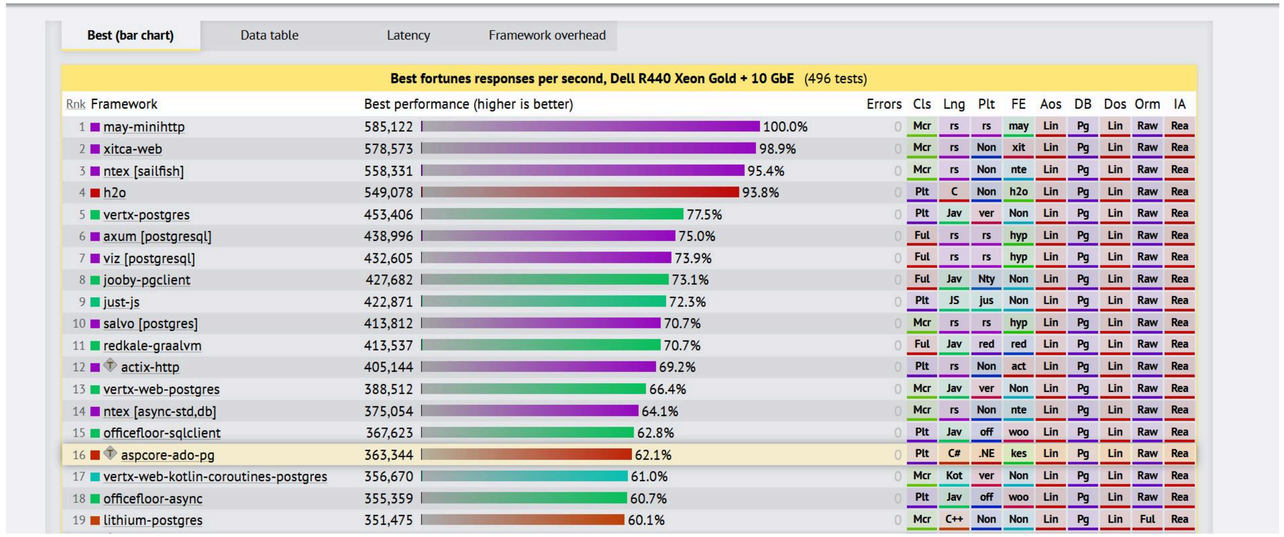
1. Modern web framework-based landing page to generate traffic
2. Blogging for generating traffic with comparisons etc
3. G2 customer reviews research
4. G2 customer reviews incentives
5. Social media (Linked In first of all)

Operations

1. LTD for more transparency (Not in India)
2. Stripe and other processing

Assets

ASP core ins one of the fastest backend frameworks, this can be a huge part of USP



Best (bar chart) | Data table | Latency | Framework overhead

Best fortunes responses per second, Dell R440 Xeon Gold + 10 GbE (496 tests)
